

# Polygonal Paper

---

## Instructions

on gluing the rhino mask from paper

# Author's note

Thank you for purchasing the files for making the rhino mask!

You will need about 6-8 hours on gluing it.

It is better if you have the skills of working with paper, but you can make a model, even if you have never done anything like this. In the first place, the result will depend on your attentiveness and exactitude.

Video tutorial: <https://youtu.be/Y63wporZrkE>

We put a lot of effort into creating this model. It is forbidden to use any materials for the purpose of making profit, and also to share them.

# You will need for work

**Any cutter for paper.**

**A metal ruler.**

**Super Glue or UHU glue.**

**Elastic String (30-40 cm).**

**Page 5 printed on office paper.**

**Sheet of plastic A4.**

Sometimes it's called a cover. Just in case, please buy two sheets, because this material is fragile.

**Template (pages 1-4).**

Printed on paper weights 200-250 gr. / sq.m. Please, do not use office paper (80-90 gr./ sq.m.). This paper is too thin. You can use aquarelle paper. This paper has a light texture, thanks to this gluing places of the finished model is almost unnoticeable. If you want to get colorfull model, please print the template on coloured paper. Do not paint it.

**A surfase for the cutting.**

You can use a piece of old linoleum, or a glass panel, or a clean cutting board.

# Work sequence

## 1. Cutting paper details.

Cut out all the details on the 1-4 sheets of paper along the solid line. You will get the best result if you will cut the paper with a cutter by ruler.

## 2. Cutting plastic details.

Put the sheet of plastic on the sheet of paper with stencil. You can fix the sheets with glue or tape. Cut through both sheets at once. Or use the method from our video tutorial (starting at 1.43): <https://vimeo.com/290165112>

## 3. Folding.

Carefully snick (but do not cut through) the paper and sheet of plastic along the dotted and dashed-dotted lines. This is necessary to make the folding in these places easier. [Watch our video tutorial: https://vimeo.com/290165112](https://vimeo.com/290165112)

The dash-dotted lines denote folding of the paper to the outside (there are diverging arrows in this places). The cut should be made on top of the drawing.

The dotted lines appear in the places where the edges of the paper must be folded over to the inside (this movement is indicated by converging arrows). The cut should be made on the side of paper without drawing.

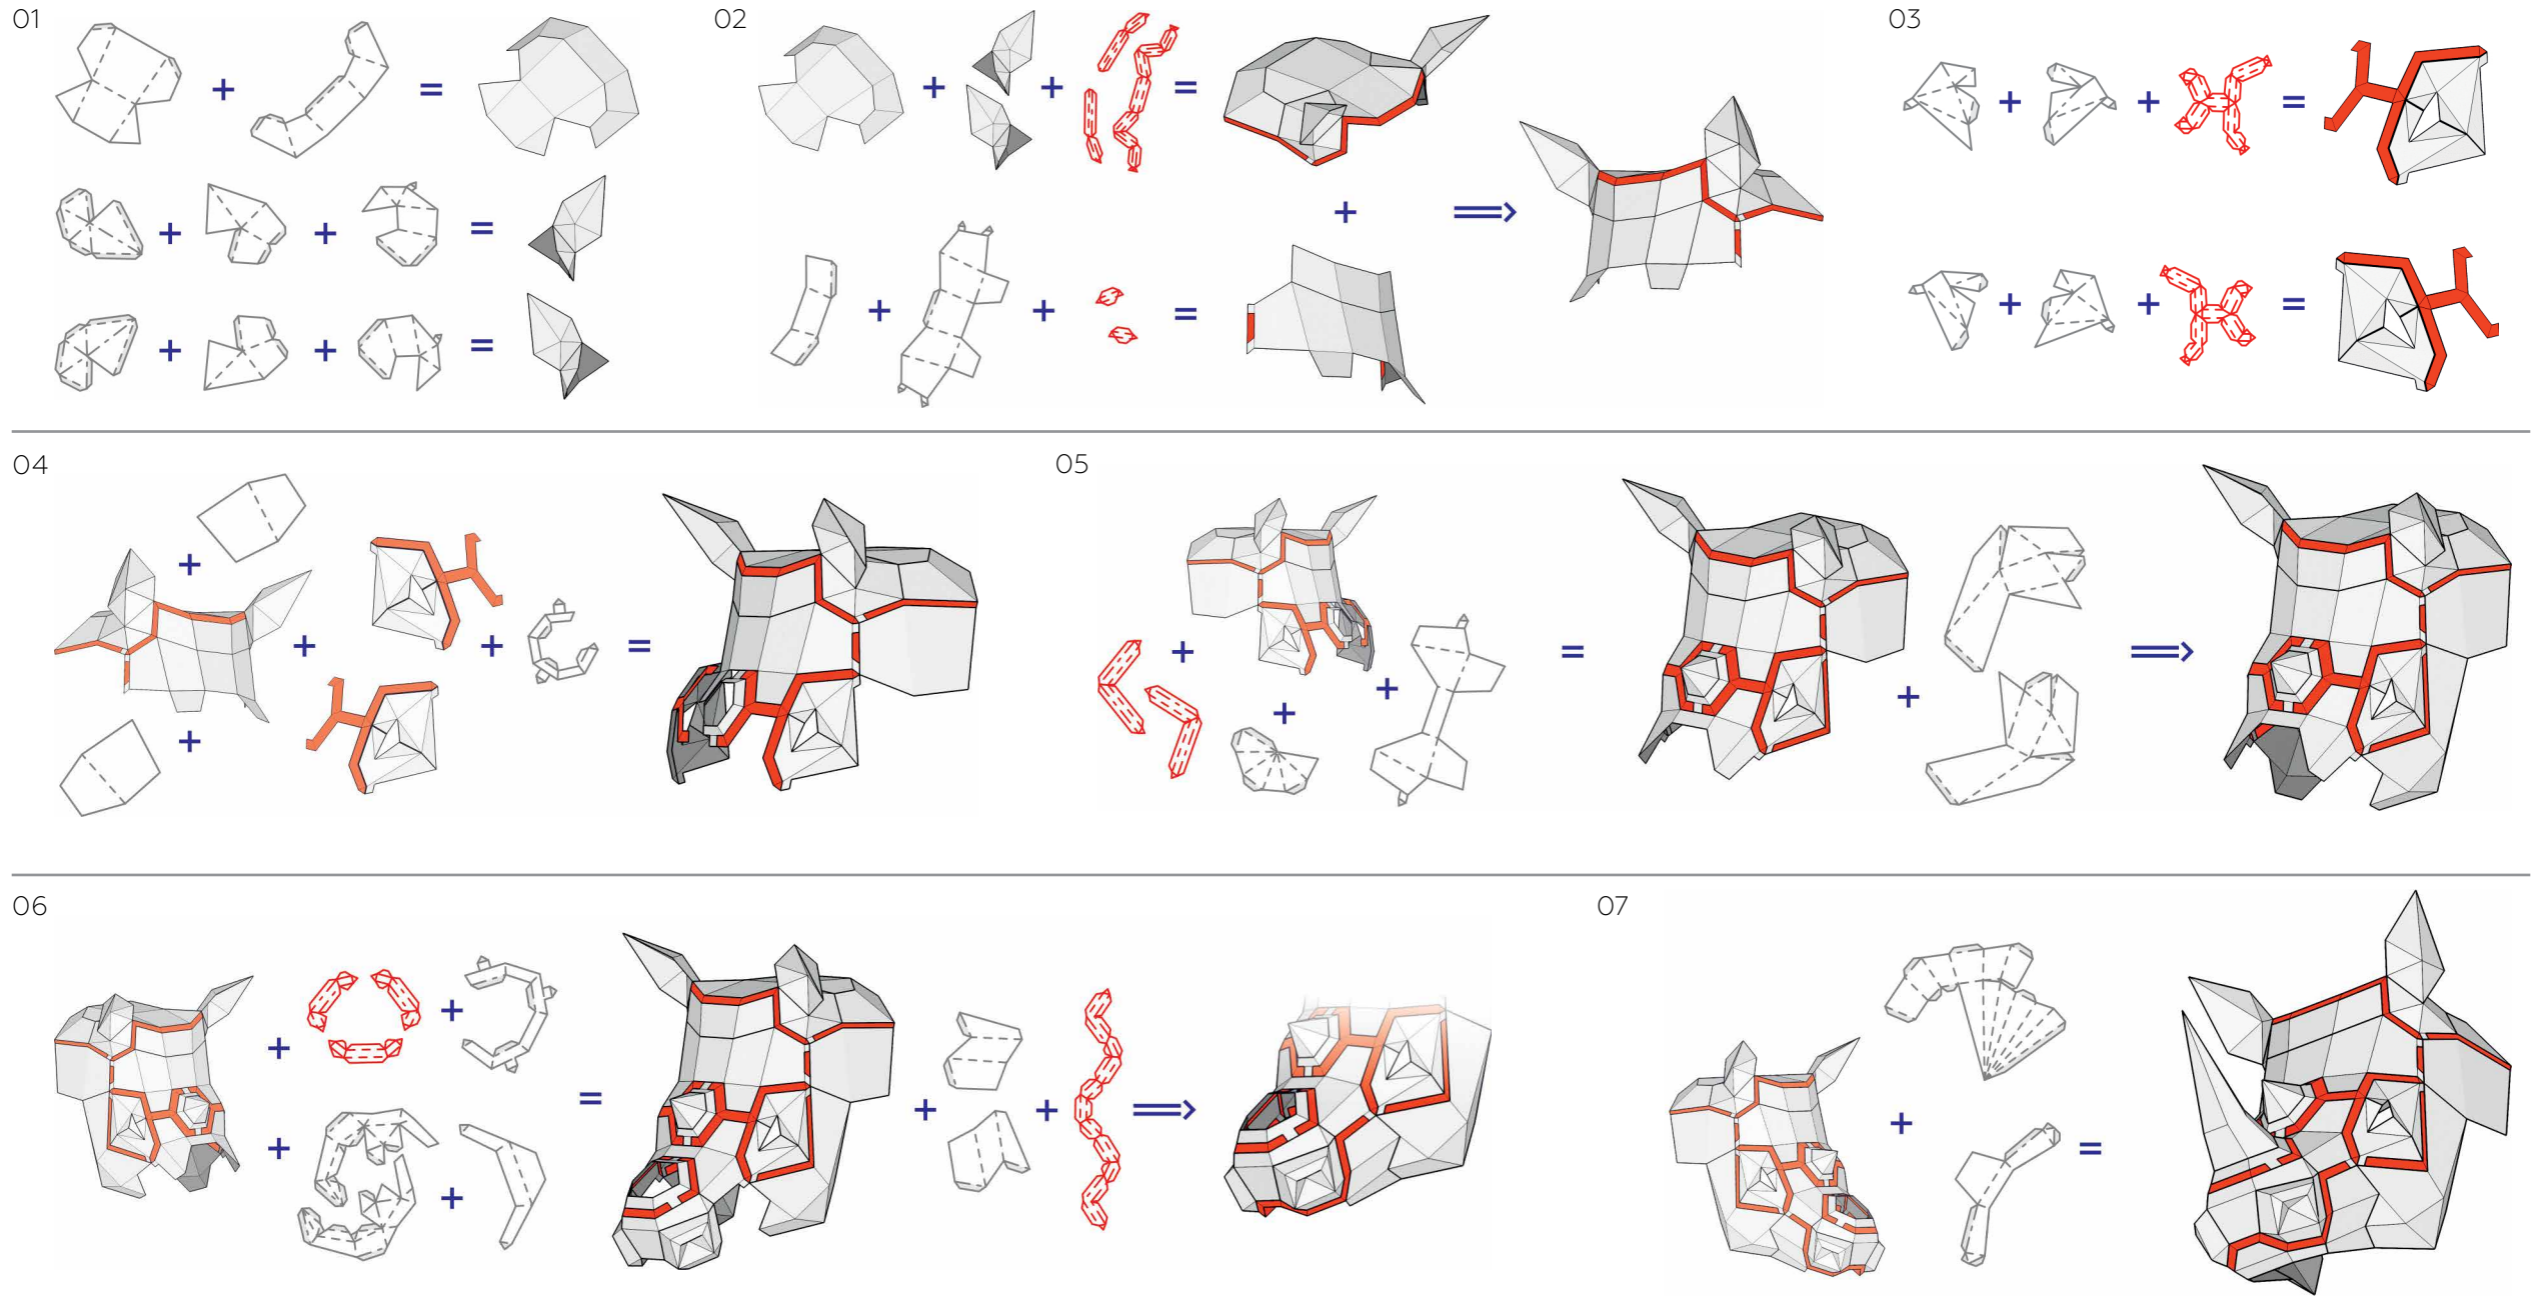

## 4. Gluing.

The workplace have to be clean. If you stained your hands with glue, first wash them, then continue the assembly.

Fold all details along the lines.

The side of the paper with lines is the inner side of the model. The edges which should be glued together are denoted by the same numerals. For convenience, there are flaps for glue on the template (marked in gray). Start gluing together the edges from numbers «1», then «2», etc.

**Thank you!**
